EDUCATION

- | | |
|---|-------------------|
| • Alipurduar Government Engineering and Management College | 2023-27 |
| <i>BTech in Artificial Intelligence</i> | Pursuing |
| • Barajaguli Gopal Academy (WBCHSE) | 2022-23 |
| <i>Physics, Chemistry and Mathematics</i> | Percentage: 65.04 |
| • Barajaguli Gopal Academy (WBBSE) | 2020-21 |
| <i>Secondary Education</i> | Percentage: 77.7 |

TECHNICAL SKILLS AND INTERESTS

Programming Languages: Python, C++, SQL

Frameworks: Flask, Pandas, NumPy, Matplotlib, Scikit-Learn, OpenCV, PyTorch

Core Areas: Machine Learning, Deep Learning, Computer Vision, Data Preprocessing

Other Skills: Git, SQL, Docker, Linux, MySQL

RELEVANT COURSEWORK

- | | | |
|---------------------------|-----------------------------------|-------------------------------|
| • Machine Learning | • Data Structures & Algorithms | • Database Management Systems |
| • Deep Learning | • Design & Analysis of Algorithms | • Operating Systems |
| • Artificial Intelligence | • Probability & Statistics | • Computer Networks |

PROJECTS

- **Plant Disease Classification (Ongoing)** *Python, PyTorch, OpenCV*
Applying attention-driven multi-ViT architecture to plant disease detection.
 - Developing a multi-Vision Transformer pipeline that uses attention scores to weight informative regions of leaf images for fine-grained disease classification.
 - Designing a data preprocessing and augmentation pipeline for plant disease image datasets to improve model generalization.
 - Benchmarking attention-weighted multi-ViT performance against baseline CNN architectures to quantify accuracy gains.
- **Wireless Data Transfer (WDT)** *Python, Flask, Raspberry Pi*
Secure Flask-based wireless file transfer system with QR-code access and SSH-gated admin control.
 - Built a production-ready wireless file transfer system for local networks, deployed on Raspberry Pi Zero 2W.
 - Implemented general and token-based secure upload modes with QR-code access and 24-hour auto-expiry.
 - Designed an SSH-tunnel-only admin dashboard, eliminating exposed admin credentials over the network.
 - Added multithreaded background cleanup, session handling, and CSV-based audit logging for all file activity.
 - Supported cross-device access (mobile/desktop) with production deployment via Gunicorn and systemd.

CERTIFICATES

- **Certificate for Python for Data Science, AI and Development** from Coursera
